FlexLink 16ft LED Roll

Color-Changing Roll

Your FlexLink LED strip will have 3M adhesive throughout the back. Cut lines are on the LED strip for those who wish to cut the 16ft roll to a different length.

Step 1: Measure and prep the area you will be installing the LED strip on. **Make sure the surface is clean & dry**.

Step 2: Remove the adhesive protector and carefully tape the LED strip to the previously measured area.

Step 3: Plug the connector on the LED strip to the receiver on the LED controller. *Arrows on the connectors should be aligned.

Step 4: Wire the solid black wire on the receiver to a **+**12V source.

Step 5: Wire the black wire with **WHITE lines** to a **negative (-12V)** source (GROUND).

Step 6: Use the controller to turn the LED's on/off.

Please be aware that if the LED strip is cut, it is the owners'/installers responsibility to seal the cut ends to prevent damage to internal circuits. Damage will not be considered manufacturer defect.
